To Pre-Penn

Midwest and Hall #1 Donaldson,
~~NE~~ NE NE, 25-5S-18W,
Elevation 1936' 1933 DF

Pennsylvanian conglomerate 3417-?
3417-3440 Conglomerate of coarse sand, stained chert, and sandy and cherty red and green clay.

No identifiable pre-Pennsylvanian formation was reached. Some of the conglomerate, particularly from 3433-35', carries oilstain. It is impossible to be certain as to the identity of the underlying pre-Pennsylvanian, although it should be either Cotter, Pre-Cotter, or Decorah.
