

LKC

3412-3417 Limestone, crm-tan, fine crystalline, Lt staining to slight saturation, slight odor, Free oil on break.

Arbuckle

3579-3590 Dolomite, White, very clean, fine crystalline and rhombic, Good Odor, Good Saturation increasing in depth, good amount of oil on Break.

3632-3641 Dolomite, White-Tan, fine crystalline, Sucrosic Medium grain, Fair saturation, Slight Odor, free oil on Break.

Recomendation:

This well Being high to flat in the area, it was recommened to perforate the upper LKC zones. The Arbuckle ran Fairly Low for the area, but with the amount of oil in the samples and the favorable log, this should be opened before abandoment.

Respectfully Submitted,
