Was an artificial liner used? ☐ Yes ☒ No	
If no, how were the sides and bottom sealed to prevent downward migration of the pit contents? The bottom and walls were sprayed with bentonite gel to seal the drilling pit. During drilling operations, all clear fluids were pulled as they settled out, as per pit permit requirements.	
Abandonment procedure of pit: All fluids were pulled from the pits and they were allowed to dry by evaporation. After the pits appeared to be drying properly they were partially closed and windows cut to allow better air circulation. After inspection, and when we could walk across the dried pit, they were closed. Fresh top soil was placed on top and met landowners approval. Drit Contractor: Langfeld Dirt Service, Inc. - P.O.
