REMARKS

Trans Pacific has reviewed the electric logs, DST's and samples on the Fleming "A" #1-14. All zones which carried any shows of oil were drilled stem tested. All five DST's were considered by TPO to be non-commercial. The only zone which showed any interest was the LKC 140' zone. This zone recovered 20' of clean oil and 10' SCOM with BHP 1048-915#. The DST charts suggest depletion and the 2 ft zone only carried 9% porosity. This hole was drilled to 3775 into the Pre-Cambrian Granite Wash. No shows were drilled in the Arbuckle, Reagan or Pre-Cambrian. It is our opinion that no other zones warrant further testing and that the Fleming "A" #1-4 be plugged and abandoned.
