Controlling data is based upon the best maps and photographs available to us and upon a regular section of land containing 360 acres.
Approximate section lines are determined using the actual corners of one of the original surveyors practicing in the state of Kansas. The section corners, which establish the precise section lines, were not necessarily located, and the exact location of the original location in the section is not guaranteed. Therefore, the operator securing this service and accepting this plat and all other parties relying thereon herein on their own responsibility.
