Subject: Re: Approval

Washed crushed rock and coke down to 121' , pulled all 15 anode wires from 121' where they pulled apart. Back in well bore with a 9 7/8" bit, grinding up anode wires and anodes. At 136' , called district Supervisor (Jeff Klock) and permission was given to plug at this point. There was 3.5 yards of cement pumped, and circulated to surface.

Thanks
Dave
