Re: No. 3 Bennington
Sec. 34-27S-4E
Butler County, Ks.

Gentlemen:

Enclosed is my geological log on this well. The well ran a few feet lower than No. 1 and No. 2 by estimated elevation. Shows of oil with evaluations and depths are listed below.

Lansing. 1761' - 1772' - Scattered porosity with odor, fluorescence and staining. No free oil found. Not recommended for testing.

Kansas City. 2076' - 2082' - Good porosity with odor, good show of free oil and gas, fluorescence, light staining over all of sample pieces. Recommended for testing.

2084' - 2088' - good porosity with odor, good show of free oil and gas, fluorescence, staining over all of sample pieces. marginally less attractive than zone above. Decision on testing to be made on electric log study.

Casing was run to 2098' (E. log 2100') to test Kansas City.

Sincerely,

F. W. Morgan
