Re: No. 3 Means
Sec. 1-28S-2E
Sedgwick County, Ks.

Gentlemen:

Enclosed is my geological log on the No. 3 Means. On the log I have plotted formation tops and zones of porosity with oil and/or gas shows where noted. The well ran just about flat with No. 2 Means to the north.

In the Simpson Formation we had shows of oil from 3130' to 3135' which we tested. No oil was recovered, and the results were somewhat inconclusive, but no water was recovered. There were also shows of oil from 3132' to 3145' which appeared to be better than those above. No test was run.

In the Kansas City shows of oil and gas were found at 2384' to 2386', 2410' to 2430' (top part), and 2448' to 2469' (top part).

No other shows of oil and gas were seen.

Sincerely,

F. W. Morgan
