Re: No. 2 Kleier
SENWNE Sec. 10-33S-2E
Sumner County, Kansas

Gentlemen:

You have my geological log on the No. 2 Kleier. On it are plotted drilling time, sample descriptions, formation tops, porosity, and oil shows.

The Layton "A" Zone is not too well developed, but this was expected as it matches the No. 1 well. The Layton "B" Zone, however, came up to expectations. It developed real well in the top, being about 5 feet higher than No. 1. It appears from the core fluorescense, core analysis, and the electric log that from 2719 down to about 2732 will be oil productive where porosity and permeability permit, and that below 2732 there is water.

If you need further assistance please do not hesitate to call.

Sincerely,

F. W. Morgan
