

March 28, 1966

Mr. Edwin D. Goebel  
Kansas State Geological Survey  
University of Kansas  
Lawrence, Kansas 66045

Dear Ed:

X Enclosed are the results from the No. 3 and 4 Rockwell wells. As you can see, the recovery is lousy. What do you want me to do with the residues?

Thank you for the information on the organization of the Survey. Collinson has not answered my letter of practically one month ago, so I have no information of the status of the manuscript.

Would you please send me a copy of the Kansas Rock Chart (the chart, not Bull. 80). I don't seem to have a copy anymore. Thank you very much.

Very truly yours,

*Tom*

Thomas L. Thompson  
Geologist

Enclosure

No. 3 Rockwell

3071 - 3086 (16 samples)  
No specimens

3087 (3) Taphrognathus? frags.  
(3) Ligonodina  
(1) Magnilaterella?

3088 (1) Gnathodus texanus

No. 4 Rockwell

3061 - 3074 (14 samples)  
No specimens

3075 (1) Synprioniodina

3076 - 3080 (5 samples)  
No specimens

3081 (2) Gnathodus texanus  
(1) Taphrognathus?  
(1) Spathognathodus

3082 - 3084 (3 samples)  
No specimens

These samples probably represent Salem or even possibly lower St. Louis strata. This is as much on the paucity of fauna as on the few specimens actually present.

On the whole, these wells are practically useless as far as time determination is concerned.
