Re: No. 1 Wiley
Sec. 9-34S-1E
Sumner County, Ks.

Gentlemen;

Enclosed is my geological log on the No. 1 Wiley. On the log are all geological tops, sample descriptions, zones of porosity, and shows of oil. This well ran just about flat with the producer just to the southeast on all formations above the Mississippian.

A thickening in the lower Cherokee made the Mississippian made it come in sixteen feet lower. It was so low that no shows of oil and gas were found in the porosity. Very slight shows of oil were found in a poorly developed four foot zone in the Kansas City formation. The same was true of a two foot zone in the Marmaton.

Since no commercial shows of oil were found we had no choice but to plug and abandon the well as a dry hole.

Sincerely,

F. W. Morgan
