Re: Your No 3 Caster "A"  
SWNWNE Sec. 2-34S-2E  
Sumner County, Kansas

Gentlemen:

My geological log has been delivered to you. This log includes plotted drilling time, formation tops, formation lithology, porosity descriptions, and shows of oil and gas.

The prospective sand, Layton "A" was found in samples and then cored. Macroscopic examination, given in the log, indicated that there was sufficient sand with oil shows to make a producing well.

Electric log analysis confirmed this opinion, and it was decided to run casing to test the sand. The top appears to be some 4 or 5 feet lower than the No. 1 well on this lease, a datum sufficiently high to produce.

Sincerely,

F. W. Morgan
