Re; No. 4 McClaskey
Sec. 17-35S-2E
Sumner County, Ks.

Gentlemen;

Enclosed is my geological log on this well. The well ran 4 to 6 feet low on all markers to No. 2 and No.3 well down to the Mississippian. On that marker it ran ten feet lower than No. 3 well.

There were shows of oil and/or gas in the Iatan, Stalnaker Sands, Layton Sands, Marmaton, Bartlesville Sand, and Mississippian.

Of these the zone of porosity in the Mississippian beginning at 3351 feet and continuing to the total depth of 3375 feet had excellent shows of oil and gas with fracture and pinpoint porosity and seems to be worthy of completion. The second Layton Sand beginning at 2712 feet looks favorable for completion as does the Stalnaker Sand beginning at 2352 feet. These depths are subject to log correction, of course.

Casing was run and cemented at 3374 feet to test these zones.

Sincerely,

F. W. Morgan
