

April, 1934.

Palmer #1 Steinle,
NW/c SW, 22-13S-14W,
Elevation 1844'

Pennsylvanian conglomerate. No conglomerate proper. Marine lime
lies directly on Arbuckle.

Ordovician	Top 3283'	Sub-sea, minus 1439'
Arbuckle	" " Penetration 3'	" " " "
3283-3286	Pre-Cotter. Penetration is not great enough to be absolutely certain of this correlation but the absence of residual chert and the quartzose character of the chert present indicate pre-Cotter.	

June, 1942
