November, 1940.

Gulf #1 Brungardt,
C N $\frac{1}{2}$ NW NE, 31-13S-16W,
Elevation 1967'

Pennsylvanian conglomerate None.

Arbuckle Top 3473' Penetration 19' Sub-sea, minus 1506'

3473-3478 Miller dolomite.

3478-3492 Purcell dolomite. The equivalent of the "Sander pay" was topped at 3482'. The porosity did not appear to be as good as in the #1 Sander. Cable tool core was recovered from 3477 $\frac{1}{2}$ -3481 $\frac{1}{8}$ and from 3484-3492'. Residues were made of six inch samples of the cores and from each bailer sample.
