

MP?

June, 1940.

Harris & Haun #1 Schmeidler,
SE SW, 3-13S-17W,
Elevation 2029' *VP* *Q*
L.S.

Pennsylvanian conglomerate None.

Arbuckle Top 3535' *core* Penetration 6' Sub-sea, minus 1506'
3535-3541 Dolomite, brown, medium crystalline. Porosity
 should be good but is difficult to judge.
 The sequence is not long enough for positive
 identification but the dolomite strongly
 suggest some part of the Miller-Purcell.

Restored top of Arbuckle cannot be estimated.
