Pennsylvanian Conglomerate 3167'-3170'

3167-3170 Sample largely Penn. shale, probably Caving.
Small amount light brown limestone with
included sand grains and quartzite fragments.
Loose lime coated sand grains, quartzite
fragments, and rare granite chips, rounded.

Pre Cambrian 3170'
3170-3179

Penetration 15' Subsea -1382'
Quartzite, granular, friable, with small amount
of muscovite. Slightly schistose 3176-3178.
(7 samples).

3179-3185 TD No samples.

Remarks: Dry hole. ~~XXXXXXXX~~ Failed to make a Penn. producer which
is unusual for tests in this township finding the Pre Cambrian
high.
