

Gypsy #3 Neidenthal,
NE SE SE, 14-14S-15W,
Elevation 1847'

54515
Pennsylvanian conglomerate None.

Arbuckle Top 3256' Penetration 9' Sub-sea, minus 1409'
3256-3265 Dolomite, white to brown, medium. Pre-Cotter.
This dolomite lies between the Boyce sand and
the Everleigh sand and is either Pre-Boyce or
Pre-Weigel.

042465
Cores of this dolomite show that fractures are common and are
apparently the chief reason for porosity.

The sequence between the Boyce sand and the Everleigh sand includes
the Pre-Boyce dolomite, the Weigel cherty dolomite, and the Pre-Weigel
dolomite.
