

March, 1942

Lindas, # 4 Boxberger
CEL SW SW, 24-14S-15W
Elev. 1789'

Rotary: 3 cable tool samples 3211-3221'

Pennsylvanian Conglomerate

Apparently none. Rotary samples poor--
recirculated anhydrite etc.

Arbuckle Top 3208' (Scout) Penetration 13' Subsea -1419'

Boyce Sand 3208'-3216'

3207-3211 No Samples

3211-3216 Loose sand, medium and fine, abundant
feldspar.

Base Boyce, Subsea -1427'

Pre Boyce 3216'-3221' TD

3216-3221 Dolomite, sandy, medium and fine crystalline.

Remarks: It is possible that the sandy dolomite is basal Boyce
in which case the base of the Boyce is estimated at
3225' or subsea -1436'.
