Elevation 1746'
Rotary

Pennsylvanian conglomerate 3170-3174'
3170-3174 Sandy lime grading down into calcareous sand.

Arbuckle Top 3174' Penetration ~~12~~²¹' Sub-sea, minus 1428'
3174-3179 Silicified sand and sandy coarse white dolomite.
Pre-Cotter, Boyce member.
3179-3185 No samples.
3185-3195 Silicified sand, sandy dolomite and white coarsely
crystalline dolomite. Boyce.

The dolomite with the sand suggests post-Boyce. However, the
Boyce sand contains dolomite layers, sandy dolomite, and sands.
