

May, 1937.

Jones #1 Phillip,
SE SE NW, 9-15S-17W,
Elevation 1937.

C

Pennsylvanian conglomerate 3505-3530'
3505-3530 Dark red clay, sand, and stained chert. The
lower ten feet contains some green clay and
may be residuum.

Arbuckle Top 3530' Penetration 18' Sub-sea, minus 1593'
3530-3548 Cotter dolomite.

The conglomerate caved badly and the samples are
not good. The Cotter section probably belongs
in the lower part of the Cotter.
