

October, 1936.

Gulf #2 Swires,
NE SE SW, 8-15S-18W,
Elevation 1989' *DF₄₁₂ R.*

Pennsylvanian conglomerate 3534-3554'
3534-3542 Chert; with rare sand. Clay shales. Chert is
mainly oolitic in type.
3542-3554 Chert, sand, and green clay. This may be res-
iduum in place.

Ordovician Top 3554' Sub-sea, minus 1565'
3554-3560 $\frac{1}{2}$ Pre-Cotter dolomite. The sequence shown in
this well is not sufficient for identification
but nearby wells have proved to be in the
upper part of the Pre-Cotter and the residues
from this section check for Pre-Cotter.
