November, 1935.

Rush #1 Gatewood,  
Sec. 4-15S-20W,  
Elevation 2068'

Pc:

Pennsylvanian conglomerate. Sample gap 3340-3783' Green shale  
and sand from 3783-3785'

Price had samples  
in this interval

Prc 3755  
at 3783

Ordovician Top 3785'

Sub-sea, minus 1717'

Arbuckle Top 3785'

Penetration 40' " " " "

3785-3825'

Questionable Pre-Cotter. There are four  
samples for this interval and all are similar  
in type, differing only in an increasing  
percentage of dolomite, 40% in sample  
from 3783-3790' and 82% in sample from  
3718-3725'. If these samples are repre-  
sentative the material is Pre-Cotter.  
Map as questionable Pre-Cotter.

No estimate on Arbuckle thickness except  
probably less than 300'
