

June, 1940.

Alyward #1 Haska.
C 21 22 22, 6-103-10W,
Elevation 1805'

Pennsylvanian conglomerate 3266-3271'
3266-3271 Clay shales with rare included chert.

Arbuckle Top 3271' Penetration 21' Sub-sea, minus 1466'
3271-3290 Miller dolomite.
3290-3292 Purcell, zone 5.

This test has a longer Miller interval than is
normal to the area to the southeast. The
greater part of the pay is probably at the
base of the section penetrated.
Restored top of Arbuckle is the same as the
actual top.
