Elevation
Rotary samples.

Pennsylvanian conglomerate 3307-3309'

3307-3309 Rare fine sand and chert in rotary samples. Probably
from a thin layer of conglomerate at Decorah contact.

Ordovician Top 3309'

Sub-sea, minus

Decorah 3309-3317'

3309-3317 Green and maroon shales with fine sand at base. Data
mainly from core description by Carnody.

Arbuckle Top 3317' Penetration 5'

Sub-sea, minus

3317-3322 Miller dolomite, probably lower Miller. The Purcell
was not reached.
