April 1943 ✓

Pennsylvanian conglomerate 3280'-3282'  
3280-3282 Chert and clay. Rare oxidized chert fragments  
and dark red sandy clay.

Pre Cambrian Top 3282' Penetration 41' Subsee -1411'  
3282-3283 Quartzite, white to clear, medium to coarsely  
granular with black inclusions. This is  
a very friable rock and probably drilled  
readily with rotary tools. Reaming samples  
indicate that coring was done.
