Pennsylvanian conglomerate 3274'-3279'  
3274-3279 Limestone with included fragments and pebbles  
of fresh quartzite. Marine conglomerate.

Pre Cambrian 3279' top Penetration 6' Subsea -1370'

*RE* 3279-3285 Quartzite, clear granular, friable, with  
muscovite partings.

Remarks: Test reported a show of oil in quartzite, but filled only  
10' with oil after drilling plug. Test abandoned.  
Mr. Price, Letter # 26, 1940, states that "there is some  
question as to whether the Lansing-Kansas City was  
thoroughly tested."
