Subsea -1460'

norther -feet.

3352-3357 Dolomite, white, coarsely crystalline, with good porosity and oil staining. Pre Cotter, Post horman dywy hoymru Boyce member.

Remarks: Dry hole drilled in January 1939. Abandoned after acidizing and pumping 23 BO and 16 BW in twelve hours.

> The Arbuckle dolomite is first present in a 45 minute circulation sample labeled 3339', and is very abundant in sample labeled 3341' circulated one hour, the deepest sample in the Gulf set. It is assumed that the sample depths were later corrected when pipe was set at 3352'.
