BOND

December, 1939.

Stanolind #1 Grant,  
C NW SE, 5-20S-11W,  
Elevation 1776'.

Pennsylvanian conglomerate 3315-3316'.  
3315-3316 Stained chert.

Arbuckle Top 3316' Penetration 24' Sub-sea, minus 1540'  
3316-3340 Cotter dolomite.

There is a possibility that the uppermost few feet are Purcell but this can not be verified. This is a high well regionally, on a Cotter datum. Restored Arbuckle top is estimated to be 3254, or -1480'. This estimate is based on the probable thickness of the Miller-Purcell and may be in error as much as 20'.
