

1100ft  
No change or removal of any of the surface  
was made from the base. Only 78  
feet were cut out the total distance below

December, 1939.

Hollow #1 Andrea,  
C WL NW NW, 19-20S-11W,  
Elevation 1790'

Pennsylvanian conglomerate      None.

Arbuckle   Top 3295'   Penetration 3'   Sub-sea, minus 1505'  
3295-3298   Presumably Upper Miller dolomite. The  
rotary samples and the short section do  
not permit placement in the section.

No estimate can be made as to the restored top  
of the Arbuckle. It is probable that less  
than 10' have been eroded.
