C NE, 26-4S-21W,
Elevation 2091'. *DF (printed)*

Pennsylvanian conglomerate 3600-3602'
3600-3602 Film of coarse sand and rare chert pebbles.

Arbuckle Top 3602' Penetration 63' Sub-sea, minus ⁻¹⁵⁰⁹ 1611'
3602-3663 Pre-Cotter. Rare cherts in the rotary samples
through this interval indicate the Weigel cherty
dolomite member of the Pre-Cotter. Its exact
limits cannot be stated nor can those of the
Pre-Weigel dolomite.

3663-3665 Everleigh-Reagan sand. Pre-Cotter.

The top of the Pre-Cambrian is estimated to be
within 100', or not lower than 3765'.
