Describe in detail the manner in which the well is plugged, indicating where the mud fluid was placed and the method or methods used in introducing it into the hole. If cement or other plugs were used, state the character of same depth placed from (bottom), to (top) for each plug set.

A mixture of common cement (120 sks with 7.75 gallons of water per sk) was calculated to fill 1352' of 4.5" I.D. and 800' between 4.5" and 6.25" hole to ground level. No mud mixture was used. Cement was poured into the hole up to G.L. Pipe was then cut off 50" below G.L. KCC on site at time of plugging.
