Describe in detail the manner in which the well is plugged, indicating where the mud fluid was placed and the method or methods used in introducing it into the hole. If cement or other plugs were used, state the character of same depth placed from (bottom), to (top) for each plug set.

Plugging was completed by Allied Cementing Co., L.L.C. using conventional methods. A total of 480 sacks of 60/40 pozmix/cement with 4% gel and 800# of hulls were used over a two day period (95 sacks, 2nd day also included 3% cc). The amounts are included on the two attached cement tickets, it took two days because the cement did not circulate until the 2nd day. We had a KCC official from our local Hays office on location both days. Two inch tubing was set at 1500', mixed 375 sacks on Day One, 80 sacks Day Two cement circulated to surface, topped off with 15 sacks.
