Plugging Commenced: 9/5/08
Plugging Completed: 9/5/08

Show depth and thickness of all water, oil and gas formations.

Oil, Gas or Water Records		Casing Record (Surface Conductor & Production)				
Formation	Content	From	To	Size	Put In	Pulled Out
		unknown	unknown	unknown	unknown	none
		625	surface	2-3/8"	625	625

Describe in detail the manner in which the well is plugged, indicating where the mud fluid was placed and the method or methods used in introducing it into the hole. If cement or other plugs were used, state the character of same depth placed from (bottom), to (top) for each plug set.

This is an old well bore that we were unaware. We do not have any information on this well

rigged up on location to begin drilling on an old abandon well to T.D. in prep for plugging. Rig ran 2-3/8" tubing down hole to drill out well. Rig crew drilled down to 225', started drilling wood for a couple of feet

then began washing down hole again. After continuous washing the crew finally @ 625' couldn't make any more progress. Cement crew then tied on the tubing and started pumping 14# cement.

After bringing cement to surface the rig crew pulled 10 jts of tbg and the cement crew circulated cement to surface. After pulling the remaining tubing the cement crew topped off the well. Used 157 sks cement. well is plugged
