## SUMMARY OF POROUS ZONES & OIL SHOWS

Conglomerate: (4331-4344) Composed of shales; red, yellow, gray

and green with some sand clusters. Some red and

yellow cherts with no shows.

Mississippian: (4344-4352) Composed of cherts white to yellow,

sharp and fresh. No shows.

(4352-4360) Cherts leached and tripolitic with good apparent porosity carrying a good odor. Good show of free oil and good florescence. <u>Estimate Commercial</u>.

## RECOMMENDATIONS

This well ran structurally favorable as compared with other wells in the immediate area. It was a few feet lower than the Williams # 1, the north offset, and a few feet higher than the Smith # 1, the southwest offset.

Good shows of oil and gas were encountered in the "Pay Zone" section in this well from 4352 to 4360 feet and were consider ECHIVED be of Commercial value.
