The subject well was approved by your office on March 23, 1994.

It has come to my attention that some of the information submitted in the A.P.D. was incorrect. As per Leonard Schuckman's conversation with Keith Tyler during the onsite inspection, Hellar requests permission for the following:

Drill cuttings and drilling fluids are to be contained within steel tanks that are placed in an open excavation. Drill cuttings and fluids will be displaced into a lined earthen pit with proper integrity to prevent any fluids to escape. Fluids and cuttings will be hauled during drilling operations to an existing reserve pit located on the Christian Church #1 located in the NW SE SW on Section 5. After the well is completed the pit liner will be removed from the pit and location for proper disposal.

In addition, approximately 266'-270' of surface casing will be run, rather than the 230' originally submitted in the A.P.D.
