Actual Plugging Report:

A one inch cement string was washed to 900 ft and then removed. The wellhead was hooked onto directly and circulation established by pumping 10 bbls of fresh water. The well was then pumped full of cement by squeezing with 70 sacks of cement and cottonseed hulls. The well would not shut in with any pressure. Came back the next day and tagged cement at 470 ft. The well was then pumped full of cement from 470 ft to surface thru the cement string. A total of 87.5 sacks of portland cement were used to plug well.
