Proposal Rcvd. from: MIKE COLVIN Company: _____ Phone: (785) 448-8112

Proposed Plugging Method: 1.315" tubing will be run to PBTD. 20 sx of Portland A cement will be circulated to surface. Tubing will be pulled and cement will be added inside 2.875" tubing to maintain cement to surface. After cement is cured, surface and production casing will be cut off below ground level, and the ground will leveled and seeded. This well is not perforated but I could not figure out how to make this form work with no perforations. I will also note this in the notes to KCC.
