1. *Phylogenetic relationships* – The phylogenetic relationships among the studied taxa were determined using the maximum parsimony (MP) and Bayesian inference (BI) methods. The MP analysis was performed using the PAUP 4.0b10 software (Felsenstein, 2001). The BI analysis was performed using the MrBayes 3.2.2 software (Ronquist & Huelsenbeck, 2003). The results of the MP and BI analyses were compared to determine the most reliable phylogenetic tree. The MP analysis was based on the parsimony criterion, which seeks to find the tree with the fewest number of evolutionary changes. The BI analysis was based on the Bayesian criterion, which seeks to find the tree with the highest probability of being the true tree. The results of the MP and BI analyses were compared to determine the most reliable phylogenetic tree. The MP analysis was based on the parsimony criterion, which seeks to find the tree with the fewest number of evolutionary changes. The BI analysis was based on the Bayesian criterion, which seeks to find the tree with the highest probability of being the true tree.
