This Well's structure has been changed to allow preventing the well head to meet existing state regulations. This was accomplished by cutting off the rmp plastic 3 ft. below grade, allowing a PVC to RMP plastic sleeve to join 5" PVC Plastic Casing to a vented well head 22" above grade and a brass offset adapter 3 ft. below grade to accommodate delivery to the house and receive electricity to the pump. By joining a 5" casing clamp and attaching it to the top of the cement culvert and the cut off end of a Bellend of 2" Propine tubing make for a structural installation
