

*Red Bluff*  
Ex  
16-18-3<sup>rd</sup>

August 5, 1974

X Logs of test holes for proposed Hollisson County Well site  
in SE. SE. sec. 14, T. 18., R. 3., Hollisson County, Kansas. Depths in feet  
below land surface.

No. 1, Top of N-S ridge through center of site, 10 ft. north of south fence line.

Elastocene:

0	1	Soil, clayey, dark gray
1	6	Clay, silty, light gray (earthen silt)
3	1.5	Silt, bloddy, dark gray, grades down to gray-brown (earthen soil)
4.5	3	Clay, compact, tan
7	21	Clay, compact, tan to buff, mottled gray-green; contains large caliche nodules. Clay content and caliche decreases downward.
21	2	Silt, slightly clayey, light brown mottled light gray; contains few caliche nodules
22	3.5	Clay, silty, compact, light brown mottled white; contains some caliche in large nodules
23.5	4	Clay, silty, compact, light brown; contains much caliche in whitish nodules in top; fairly firm zones of "water beans", silty.

No. 2, 500 ft. S.E. along ridge alignment of No. 1

Elastocene:

0	1	Silt, clayey, dark gray
1	4.5	Silt, clayey, brown
4.5	14	Clay, compact, light gray-green and light brown; contains little caliche, nodular
14	1	Clay, silty, compact, light brown mottled light gray; contains very little caliche, nodular
19	21	Clay, silty, compact, light brown mottled light gray; contains much caliche, nodular
21	30	Clay, silty, compact, light brown mottled light gray; contains little caliche, nodular
30	35	Clay, silty, compact, partly cemented by caliche, fairly hard.

✓ GOES TO ~~Red Rock~~

No. 3, 450 ft. west of No. 1. On slope near east edge of ravine in S. c.r. of plot

Elastocene:

0	3	Silt, bloddy, black
3	7	Clay, compact, dark gray
7	14	Clay, compact, brown tan tan
14	22	Clay, compact, tan mottled white; contains little nodular caliche
22	38	Clay, very compact, tan
38	52	Clay, very compact, light gray and light brown; partly slightly cemented by caliche

August 26, 1974, continued

## No horizon versus landfill site, El Paso Co. 14-1-1.

## No. 3, continue of from page 1.

- 50 92 Clay, compact, light gray and light gray-brown  
92 103 Clay, sandy, brick red; contains fine shale fragments

Unconsolidated:

- 103 103.5 Shale, weathered, clayey, yellow  
Water level measured in hole 1 hours after drilling, 9 ft. below land surface.  
No measurable permeability below top soil zone.

## No. 4, 450 ft. west of No. 2 (on top of ridge)

## Pleistocene:

- 0 2 Clay, silty, brown  
2 14 Clay, silty, buff and light gray-green; contains nodular caliche  
from 7 to 10 ft.  
14 22 Silty, sticky, light brown; contains some caliche, nodular.  
Lower 4 foot gradational into underlying sand. Over 4 foot probably  
Tarnish soil.  
22 32 Clay, compact, silty, buff to brown and light greenish-gray; contains  
large caliche nodules  
32 40 Clay, compact, brown and light gray; partly slightly cemented  
by caliche and containing large caliche nodules

## No. 5, 300 ft. east of No. 4, on side slope

## Pleistocene:

- 0 1 Clay, silty, gray-brown  
2 12 Clay, silty, light brown mottled light gray; contains some caliche,  
nodular  
12 19 Clay, compact, light gray and buff; partly slightly cemented by  
caliche. Thin fairly hard "mortar" at 1 ft.  
19 30 Clay, compact, light brown; contains little caliche, nodular

## No. 6, 225 ft. west of No. 4, on side slope

## Pleistocene:

- 0 1 Clay, silty, light gray-brown  
1 10.5 Clay, silty, light brown; contains some nodular caliche  
10.5 19 "mortar", fairly firm, clayey  
19 32 Clay, silty, compact, light brown; contains large caliche nodules

## No. 7, 450 ft. east of No. 1

## Pleistocene:

- 0 5 Clay, silty, compact, light brown  
5 6 Clay, compact, gray  
6 26 Clay, light gray, light brown and tan; some nodular caliche  
26 26.2 "mortar", clayey, fairly firm  
26.2-30 Clay, compact, tan; some caliche in large nodules
